Support for asset management

Stereau Equipements et Services, Stereau's expertise center, includes engineers and experts specializing in water treatment plants and drinking water production.

Maintaining production equipment in good condition is a crucial factor for the productivity and sustainability of treatment plants. Optimized maintenance helps achieve the following objectives:

- Ensuring service continuity by increasing the reliability and availability of equipment.
- Reduce risk levels
- Take sustainable development into account in maintenance strategy (e.g., renewal of energy-hungry equipment following an energy audit)
- Reduce downtime costs
- Increase equipment lifespan
- Improve work scheduling
- Reduce and smooth team workloads
- Facilitate inventory management (consumption forecasted in advance)
- Ensure safety (work in a controlled and prepared environment)

Stereau Equipements et Services offers

Targeted support for equipment maintenance, including customizable services such as:

- Implementation of maintenance management tools
- Carrying out inventories
- Drawing up renewal plans
- Assistance in drawing up maintenance operating procedures
- Maintenance audits accompanied by proposals for improvement actions
- Energy audits, drawing on the expertise of SAUR subsidiary RIVENTA, to maximize the lifespan of rotating machines, pumps, boosters and turbo-compressors, reducing energy consumption by 5% to 15%

The experts from Stereau Equipements et Services are available to analyze your needs and offer targeted support, enabling optimized management of your assets in line with the requirements of service continuity and sustainable development objectives.
