

Sheet 11

Optimized operation through process audits.

Stereau Equipements et Services, an expertise center affiliated with Stereau, comprising engineers and specialists with expertise in wastewater treatment plants and drinking water production.

Stereau Equipment and Services offers operators the opportunity to conduct process audits, which have the following objectives:

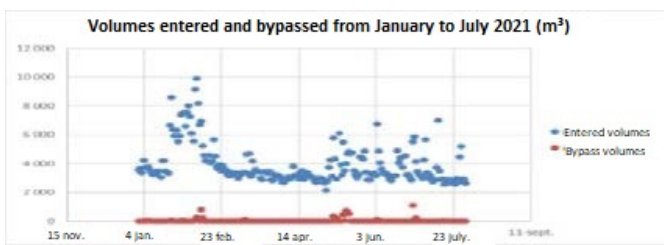

- To optimize treatment quality
- To minimize reagent consumption
- To minimize energy consumption
- To anticipate the replacement of strategic equipment
- To ensure service continuity
- To prevent any malfunction

Stereau Equipment and Services offers a two-step audit methodology.

Step 1 : A remote operational diagnosis based on the plant's process monitoring data, using self-monitoring reports and remote access to the supervisory system

Step 2 : A visit by our experts to the plant to finalize the audit

A detailed report, along with recommendations and preventive and corrective actions, is provided to the operator upon completion of the comprehensive audit. An oral presentation of this report can be conducted upon the client's request. This audit may lead to targeted training sessions conducted by the experts at Stereau Equipment and Services.

The experts at Stereau Equipment and Services are at your disposal to analyze your needs and offer you a process audit for your plant. This approach aims to optimize treatment quality, minimize fluid consumption, and anticipate the replacement of strategic equipment.
